

Affiliate Compare provide a free price comparison results service for affiliates across a number of different product ranges including DVDs, Books and Music CDs.

We bring together all the data from the major online retailers in each product category and display the products in descending price order including delivery costs.

Affiliate Compare services are easy to setup and can be used by just knowing how to copy and past HTML code.

The embedded option allows webmasters to fully integrate affiliate compare content into their sites by just adding several lines of PHP code into 2 web templates.

Affiliate Compare content can be fully customized to give it the 'look and feel' of the webmasters site. Colours and fonts can all be changed by CSS settings.

Affiliate Compare takes away the problems of loading product databases and integrating disparate affiliate feeds and extracting real time data from retail websites by providing a service that covers it all.

Each user creates a 'service' which covers product category and the results are either displayed as a popup or embedded into the site. Each service has a unique Site ID which is used to track all the webmasters sales.

Affiliate Compare offers a Free Service but takes a percentage of the sale commission. Payments are made to affiliates by cheque or paypal.
